INVESTMENT CAST HEAT TREATING BASKETS

FeRRALLOY

SureStack Baskets are the Solution!!!

- SureStack baskets provide an answer to many of the problems of the more traditional rod frame welded baskets! Our light weight investment cast baskets have additional intrinsic stiffness that a casting provides and is designed to stack in a way that combats the distortion of a traditional rod frame basket.
- An added benefit of this alternative is that these baskets have no welds in them as they are cast in a single piece.
- Taking the time to understand your specific process, we can recommend the correct alloy grade that will perform at a higher level than what you've experienced in the past. Current customers are receiving 30-50% more cycle life from our SureStack Baskets than their previously used rod frame fabrications!
- We are producing assorted heights for the Super30 style furnaces, 30 x 24" Base Trays, as well as the Super36 style furnaces which use 36 x 24" Base Trays.
- Contact us to learn more about how a SureStack solution can be right for your operation!
